INTRUDER ALARM SYSTEM

Better get a visit from a Concept Security Adviser **BEFORE** your home gets a visit from someone else!

**THE UNIQUE CONCEPT TOTAL SECURITY
INTRUDER ALARM SYSTEM**

1 IN EVERY 5 HOMES IS BURGLIED EVERY YEAR! A FULLY WORKING ALARM SYSTEM STOPS 80% OF BURGLARIES.

Why do I need a burglar alarm?

Every year 1 in 5 families across the UK go through the misery and loss caused by burglary, with the economic climate these figures are set to grow – now is your chance to make sure yours is not one of them.*

What makes the Concept Intruder Alarm System different?

Concept alarms are completely wireless meaning no disruption to decorations. Our alarm systems are manufactured by the leading alarm system manufacture Yale. We offer 2 systems our standard system and our deluxe system the deluxe system will call up to 3 phone numbers should your alarm be activated.

As simple to set as your car alarm

Is the Concept Intruder Alarm System difficult to use?

No. The alarm is set by pressing one button and unset by your own 4-digit password. You can also use a remote key-fob button rather like a car alarm. You can use the key-fob button, which also operates as a personal emergency alarm, also known as a panic button. The Concept Intruder Alarm System couldn't be quicker or easier to operate.

What else can I protect apart from my home?

Because the Concept Intruder Alarm System is wirefree with a range of 30 metres you can use it to protect your garage, shed or even your caravan.

Can I move around inside my home once the alarm has been set?

Yes. Because the sensors are on the doors and windows and not in the rooms, you and your family and pets can move freely around your home without triggering the alarm, safe in the knowledge that your house is protected. The system will also accommodate internal movement detectors as a back-up but these can be 'zoned-out' when you are at home.

A burglar alarm with fire protection as well

What about fire?

With 65,000 domestic fires every year it would be dangerous to ignore the risk. The Concept Intruder Alarm System can incorporate wire free smoke detectors connected to the main alarm.

Wire free installation means less mess

Is the Concept Intruder Alarm System difficult to install?

No. Because the system is operated by radio waves there is no need for extensive wiring and the disruption that it can cause. The alarm can usually be fitted by one of our security engineers in less than a day.

For an affordable security system – act now!

What should I do next?

Act immediately. Unfortunately, too many homeowners have to experience a burglary before installing an alarm. To make an appointment....

Peace of mind from **C O N C E P T**
