the capella

the integra

the venetian

For those wanting a little more than a conservatory, the orangerie is the ideal solution.

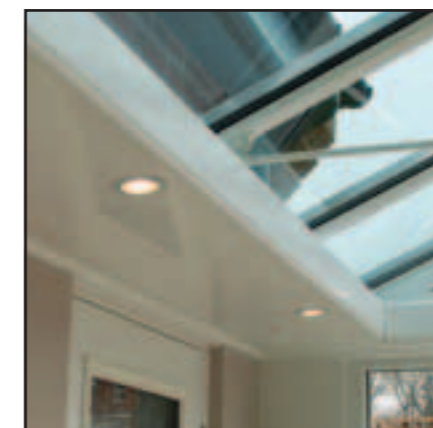

Originally designed to house and grow exotic fruits and plants, orangeries became a symbol of wealth and status.

Nowadays they provide a beautiful alternative to the traditional conservatory.

Designed with solid build columns, a partial solid ceiling, and the inclusion of a roof light, they are a well balanced mix of traditional build extensions and conservatories.

This choice of style ensures that the room forms, and feels like, an integral part of the home, blending light with reassuring sturdiness.

K2 have introduced three different orangerie styles utilising the K2 roof system, to meet the requirements of a range of tastes and budgets.

the capella

Ideal for those who are looking for something truly different but want to retain a full glass roof, the Capella also allows you to upgrade an existing conservatory to give it that orangery look.

The design drastically improves the external appearance of a standard conservatory, thanks to the aluminium high fronted gutter which hides the roof bars.

On the inside an eye-catching internal soffit allows the inclusion of down-lights or speakers, giving you a unique and highly novel appearance that will be the envy of your neighbours

Thanks to retaining the build specifications of a conservatory, no planning permission is required for the installation of a roof fitted with the Capella system.

the integra

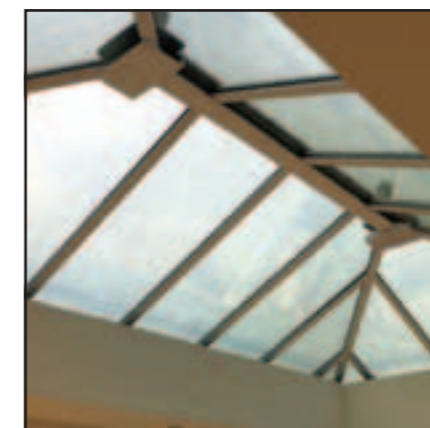

Designed for the classic and sturdy brick built orangery, the Integra system is supported on the cavity wall.

It features a "warm roof" construction that meets the latest building standards regulations. The system uses high strength aluminium that replaces traditional timber, and the wide aluminium gutter replaces traditional flat roof membranes.

The strength of the construction means that the gutter can be safely walked on for maintenance purposes.

Internally you have a beautiful 580mm deep plasterboard soffit for that unique orangery look, also allowing you to integrate downlights and speakers.

the venetian

The Venetian system will bring to your home the latest in orangery roof systems.

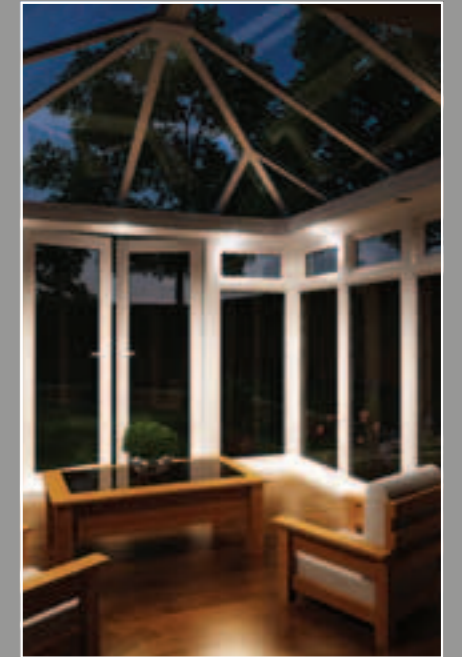

The roof is entirely self-supported by the structural aluminium legs bolted down to the foundations.

This gives complete freedom of design, allowing you to opt for fully framed walls, brick work, or large bi-folds, in the knowledge that they do not support the roof.

Using the same warm roof principle as the Integra, thus meeting the latest building standards regulations, it also has a wide integrated aluminium gutter that can be safely walked on for maintenance. Decorative aluminium hoppers and downpipes are available.

On the inside you will benefit from a substantial and visually striking 630mm plastered internal soffit
