

Window Quotation Checklist

If you're investing in new uPVC windows and doors for your home, you deserve to know the materials used are of high-quality. Concept Windows will only use industry approved products. New windows and doors will not only improve the appearance of your home, but the overall security.

To prevent you from purchasing windows that do not meet industry standards, we have created this handy checklist for you to use when comparing your window quotes. We believe when it comes to safety, corners should never be cut.

COMPLETE CHECKLIST DURING EACH QUOTATION
Concept Windows Ticks Every Box!

ARE THERE ANTI-BUMP LOCK CYLINDERS ON THE DOORS?

Did you know, thieves can open a door with a standard lock cylinder, causing no damage by using a set of special keys? The internet has many videos demonstrating how to do this so it is vital that anti-bump cylinders are used.

IS THERE AN ANTI-SNAP GUARD ON THE LOCK CYLINDERS OF THE DOOR?

Cylinders can be snapped by thieves in seconds, allowing them to gain access to your home. Always ask to see a sample to ensure the lock cylinder used on your door is reinforced with an anti-snap guard.

IS THE WIDTH OF THE FRAME CORRECT?

The width of the frame should be 70mm. Many companies supply frames under this size.

IS THERE A 10-YEAR GUARANTEE?

The uPVC profile should be guaranteed for 10-years against cracking, discolouration and warping. Check this before you make a purchase.

ARE THE HANDLES, HINGES AND LOCKS "SECURED BY DESIGN" APPROVED?

You should always ask to see a copy of the "Secured by Design" licence as this ensures that the product is approved by the Police.

IS THE WINDOW COVERED BY A BRITISH STANDARDS INSTITUTE LICENCE?

Ask to see a copy of the certificate as proof.

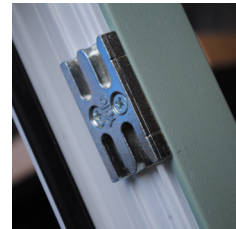

ARE THE LOCKS MANUFACTURED FROM STAINLESS STEEL?

Steel is often the choice of metal due to its rust resistant properties. As well as its significant weight-to-strength advantage, stainless steel is also very aesthetically pleasing and creates a stunning finish to any window.

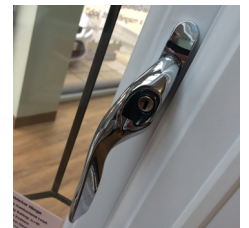

ARE THE LOCK KEEPS MADE FROM STEEL?

Some companies use plastic which can deteriorate overtime.

DO THE WINDOW AND DOOR HANDLES MATCH?

When improving the exterior of your home, cheaper companies can cut corners and fit handles that don't always match in colour and design. Concept Windows always ensure the colours match 100% before fitting and never compromise on technical excellence.

ARE THE HINGES HIGH-SECURITY?

The hinges used on the windows should be stainless steel for maximum security and corrosion resistance.

DO ALL OF THE WINDOW OPENING SECTIONS HAVE A STEEL ANTI-JEMMY DEVICE FITTED?

An anti-jemmy device will protect your windows from being levered open by force from the outside.

Windows and doors are an investment that add value to your home as well as improving the energy efficiency. Because of this, it is vital that you are guided to make an informed decision with proof that the materials used meet industry standards.
